## About These Specifications

*Specifications* characterize the warranted performance of the instrument under the stated operating conditions.

*Typical Specifications* are specifications met by the majority of the instrument under the stated operating conditions and are tested at 23 °C ambient temperature. Typical specifications are not warranted. The following specifications are typical at 23 °C unless otherwise specified.

All voltages are specified in DC, AC<sub>pk</sub>, or a combination unless otherwise specified.

Topology Dual 6 × 1 multiplexer

Refer to the *NI Switches Help* at [ni.com/manuals](http://ni.com/manuals) for detailed topology information.

**Caution** The protection provided by the NI 2796 can be impaired if it is used in a manner not described in this document.

## Input Characteristics

Maximum voltage (cold-switching only) 30 V<sub>rms</sub>

**Caution** Do not switch active RF signals. As a relay actuates, the channel is momentarily unterminated. Some RF sources can be damaged by reflections if their outputs are not properly terminated. Refer to your RF source documentation for more information.

Maximum carry current (per channel)	0.6 $A_{rms}$
-------------------------------------	---------------

Maximum RF carry power (50 $\Omega$ load)	18 W
---	------

**Note** The switching power is limited by the maximum switching current and the maximum voltage. Channel to common switching power must not exceed 18 W.

**Note** National Instruments recommends against switching RF signals below -35 dBm with this device.
